Manifesto

We believe that illuminations bring more than just light to urban areas and living spaces.

We believe in their power to amaze, to enlighten and to create fairytales.

The way we design and develop our illuminations incorporates those qualities in every detail.

We are committed to produce items of quality whilst doing our utmost to protect both the environment and humanity.

Goodwill and an ethical approach are at the heart of our company's beliefs and can be found in all our projects worldwide.

We are Blachere and we have been producing illuminations with care and passion for 45 years.

OUR INSPIRATIONS

Bioprint

A recyclable and biodegradable biomaterial made from sugar cane

Bioprint designs are made from biosourced GMO-free sugar cane which is turned into dehydrated bioethanol at a French laboratory. When the granules arrive at our workshops in Apt, France, they are dyed with our own colours. The material is then injected into our 3D printers which produce colourful, biodegradable and recyclable structures.

A process that reduces the waste at the manufacturing stage and allows total recyclability at the end of its life..

"Biodegradation" means **the decomposition of organic matter by microorganisms, with no harmful effect on the natural environment**. Our decorations biodegrade slowly at the end of their life - **they can be installed outdoors for long periods without this causing aesthetic or mechanical damage**.

One advantage of this slowness is that **it minimises the greenhouse gases generated** when the complex molecules that make up our revolutionary material biodegrade.

While industrial composting is one way to sensibly manage this biomass, **the ecofriendliest approach is to recycle the material**. By doing this, daily waste production can be minimised.

RESISTANCE

Recyprint

Less plastic bottles for a clean planet

500 billion bottles are produced every year and many of them end up being littered or in the oceans.

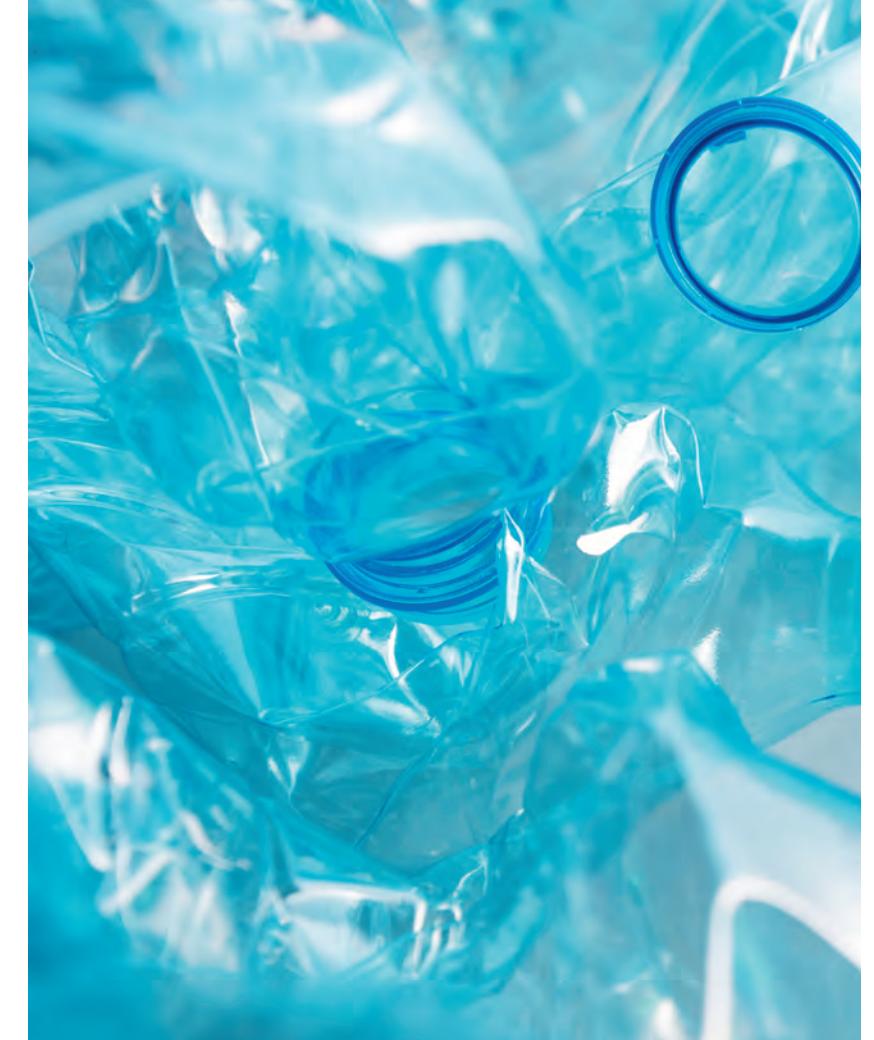

At Blachere, we have decided to tackle the scourge of plastic pollution by recycling PET (polyethylene terephthalate) from the food industry to create beautiful and innovative decorations using this unique material - rPET (recycled PET). Indeed, each year, about 8 million tons of waste end up in the oceans and form the 7th continent - a vortex of floating plastics equivalent in size to 1/3 of Europe.

Recycling, creating, innovating.

The bottles we salvage are sorted by colour (from colourless to blue), then crushed into flakes to be shaped for extrusion. The granules resulting from this transformation are then injected into our 3D printers to create unique blue decorations.

This unrivalled method helps to limit greenhouse gas emissions and to keep our nature clean from plastic bottles as far as possible.

A real and concrete example of the circular economy.

RECYCLABLE

TOTAL CIRCULAR ECONOMY
NO MATERIAL CREATED

LOCAL SUPPLY
IN rPET

8 plastic bottles are recycled into an flake of 80cm.

Our range of ecoresponsible decorations

BIOPRINT OR RECYPRINT RECYCLABLE AND BIODEGRADABLE STRUCTURE

The lighting components are wired onto a structure entirely made from our revolutionary new eco-responsible material, available in different colours.

EASY HANGING SYSTEM

The decoration is easily suspended thanks to this **resistant carabiner** attached to the Bioprint structure by a stainless steel rope and collar.

Bottles collector

Thanks to our funny characters you will encourage people to recycle their plastic bottles. You will thus contribute to a participative and fun circular economy, by reusing this waste to create enchanting illuminations for the year-end celebrations.

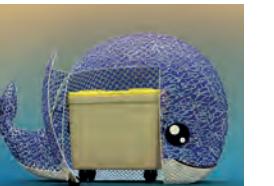

How does it work?

You can place one of our animals made from eco-friendly materials on your beachfronts and in your town centres to cover your recycling containers.

Each decoration features communication, making the public more aware of recycling by highlighting the goal: To create illuminations for Christmas thanks to the bottles!

A door is integrated on the side of the manifold to easily install and remove the recycling container.
